NOTE TO READER

This Investor Presentation contains certain information that September constitute "forward-looking information" under applicable Canadian securities legislation about Canadian North Resources Inc. ("CNR"). Forward-looking information includes, but not limited to, statements about strategic plans, including future operations, work programs, capital expenditures, discovery and production of minerals, price of metals, timing of geological reports and corporate and technical objectives. Forward-looking information is necessarily based upon a number of assumptions that, while considered reasonable at the date hereof, are subject to unknown risks, uncertainties, and other factors which September cause the actual results and future events to differ materially from those expressed or implied by such forward-looking information, including but not limited to, the risks inherent to the mining industry, adverse economic and market developments. There can be no assurance that such information will prove to be accurate, as actual results and future events could differ materially from those anticipated. Accordingly, ~~reliance should not be placed on forward-looking information.~~ All forward-looking information contained in this Investor Presentation is given as of the date hereof and is based upon the opinions and estimates of management and information available to management as at the date hereof.

CNR disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, except as required by law. This Investor Presentation has been completed by CNR. Any forward-looking statement speaks only as of the date on which it is made and, except as September be required by applicable securities laws. Although CNR believes that the assumptions inherent in the forward-looking statements are reasonable, forward-looking statements are not guarantees of future performance and its related costs and accordingly, undue reliance should not be put on such statements due to the inherent uncertainty therein.

The scientific and technical information contained in this Investor Presentation has been reviewed by Trevor Boyd, Ph. D., P. Geo, and Vice President of Exploration for Canadian North Resources, a qualified person as defined by Canadian National Instrument 43-101 for the Standards of Disclosure for Mineral Projects within Canada.

WHY CANADIAN NORTH RESOURCES?

**Critical Metals For The Clean-
Energy, Electric Vehicle and
High-tech Industries**

ASSET

- High-grade, large open pit and underground mineral resources
- Updated copper, nickel, and cobalt (Base Metal), plus palladium, platinum (PGM) resource estimate
- 100% ownership of contiguous 96.9km² mining leases surrounded by 156.9km² exploration claims, totally 253.8km²
- C\$180+ million spent in exploration, metallurgical tests and site upgrades

TEAM

- Experienced, seasoned, and dedicated

GROWTH

- Adding mineral resources from 18,144m expansion and infill drilling in 2022
- More resource expansion drilling along >15 km mineralized horizon in 2023
- Drilling test on high-potential Cu-Ni-Co-PGM targets outside the recent resource model
- Move on to pre-feasibility studies

FINANCE

- Strong shareholder support
- Well funded

NUNAVUT, CANADA - EMERGING MAJOR MINING DISTRICT

With The Development Of The Meadowbank, Amaruq And Meliadine Gold Mines

Ferguson Lake Project, 253.8 km²

Covering All The Nickel, Copper and PGM Mineralized Zones And Anomalies

Over C\$180 million has been spent on ground with >200,000 metres in >650 holes completed

1950

Today

Extensive Exploration, Infrastructure, And Mineral Resources

1950s:
INCO INC.
(SUBSIDIARY)

- 30,000m drilling, 173 holes
- East, West, and Central Zones
- Surface sampling programs

1999 to 2012:
STARFIELD RESOURCES
INC.

- 158,528m drilling
- All-season 55-person Field Camp
All-year airstrip (DHC-5 Buffalo level)
- Geochemical, geological, and ground and airborne geophysical surveys
- Extensive metallurgical work

2013 to Today:
CANADIAN NORTH RESOURCES
INC.

- 18,144m drilling in 2022
- Updated mineral resource estimate
- NI43-101 Technical Reports
- Regional reconnaissance prospecting
- Examined surface mineralized zones
- Rock chip, till and core sampling
- Metallurgical tests
- Assay of rock chip, till & core samples
- Data verification and re-evaluation
- Ground geophysics
- Camp and equipment updates

FERGUSON LAKE HISTORY: Growing in Resources

Canadian North Resources Inc.

PROJECT SITE INFRASTRUCTURE

Provides An All-season Productive Working Environment

- All-year 825 x 30 meter gravel airstrip, south-west of the Field Camp
- All-season 55-person field camp for housings, board services, and amenities
- Equipment garages, work shops, parts, and storage
- Office and work areas
- Dining and common areas
- Caterpillar Dozer, Grader, Skid-steer, Front Loaders, Excavator, Articulating and Haul Trucks
- Satellite network
- Snowmobiles, pick-up trucks and bombardier snow cat
- Portable Slag Ball Rock Crusher
- Extensive core storage

Mineral Resources

Updated Mineral Resources And Vast Exploration Potential

PARAMETERS USED FOR THE RESOURCE ESTIMATES

- 1) Resources were estimated at NSR cutoff values of US\$49.70 for open pit and US\$94.50 for underground.
- 2) NSR values were calculated using long-term metal prices of US\$8.00/lb for Nickel, \$US3.30/lb for Copper, US\$20.60/lb of Cobalt, US\$900/oz Platinum, and US\$1,910/oz Palladium.
- 3) Metallurgical recoveries used in the NSR calculation were 91% for Nickel. 94% for Copper, 90% for Cobalt, 50% for Platinum and 81% for Palladium.
- 4) The mineral resource model was based on a database that contains 611 historic diamond drill holes and a total of 186,416 metres of drilling and 36,740 assay samples.
- 5) Underground Mineral Resources were estimated using a minimum true width of 2.5 metres.

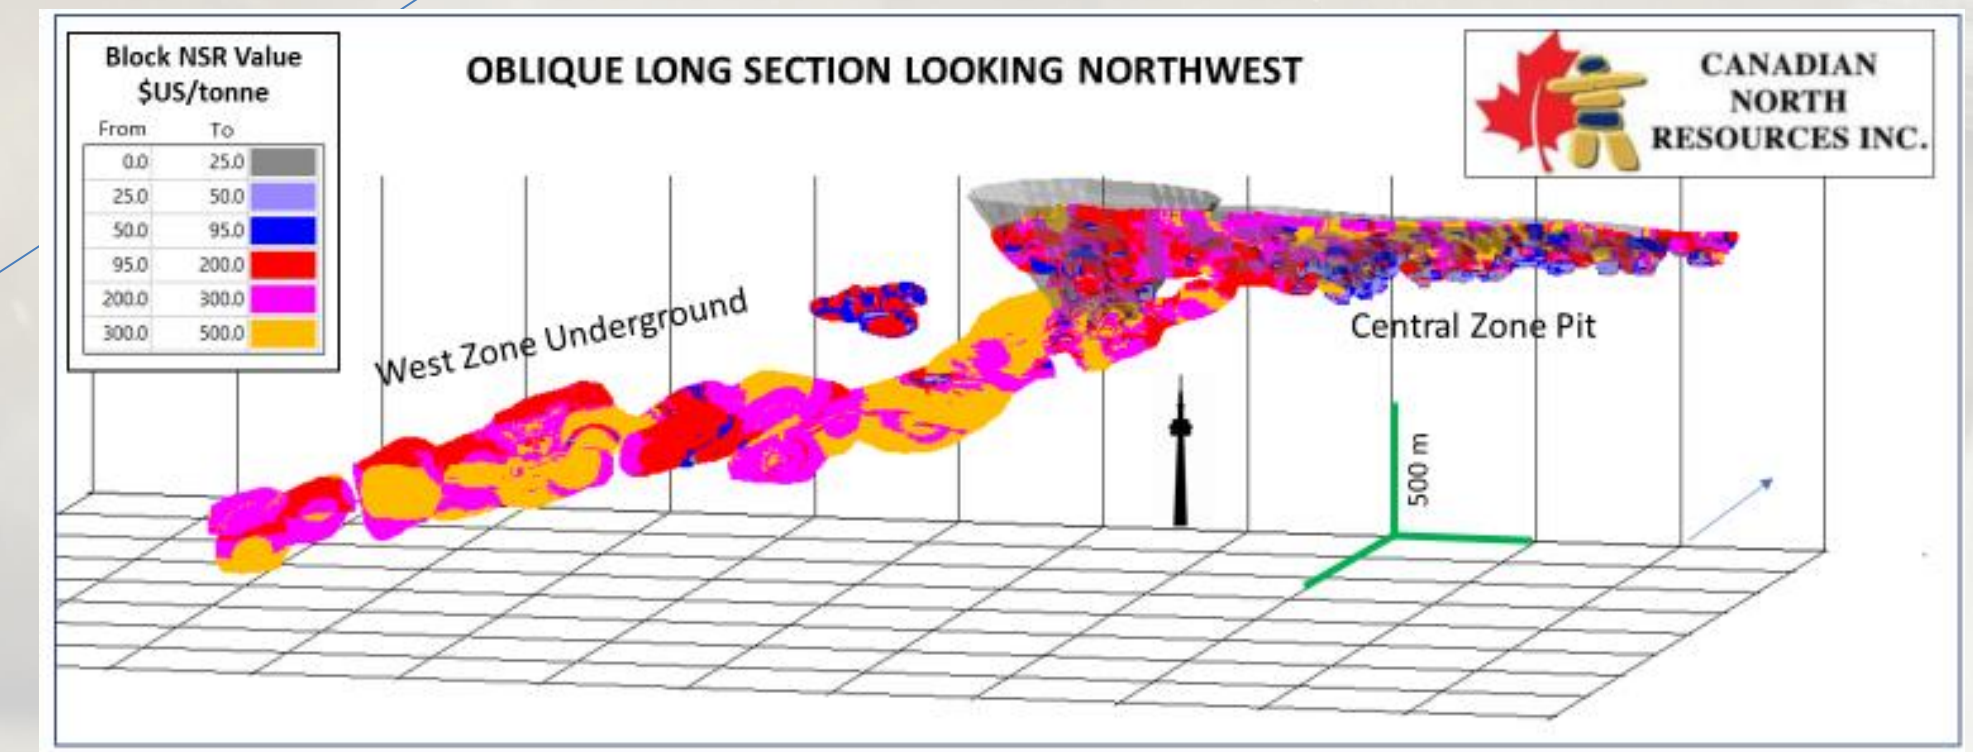

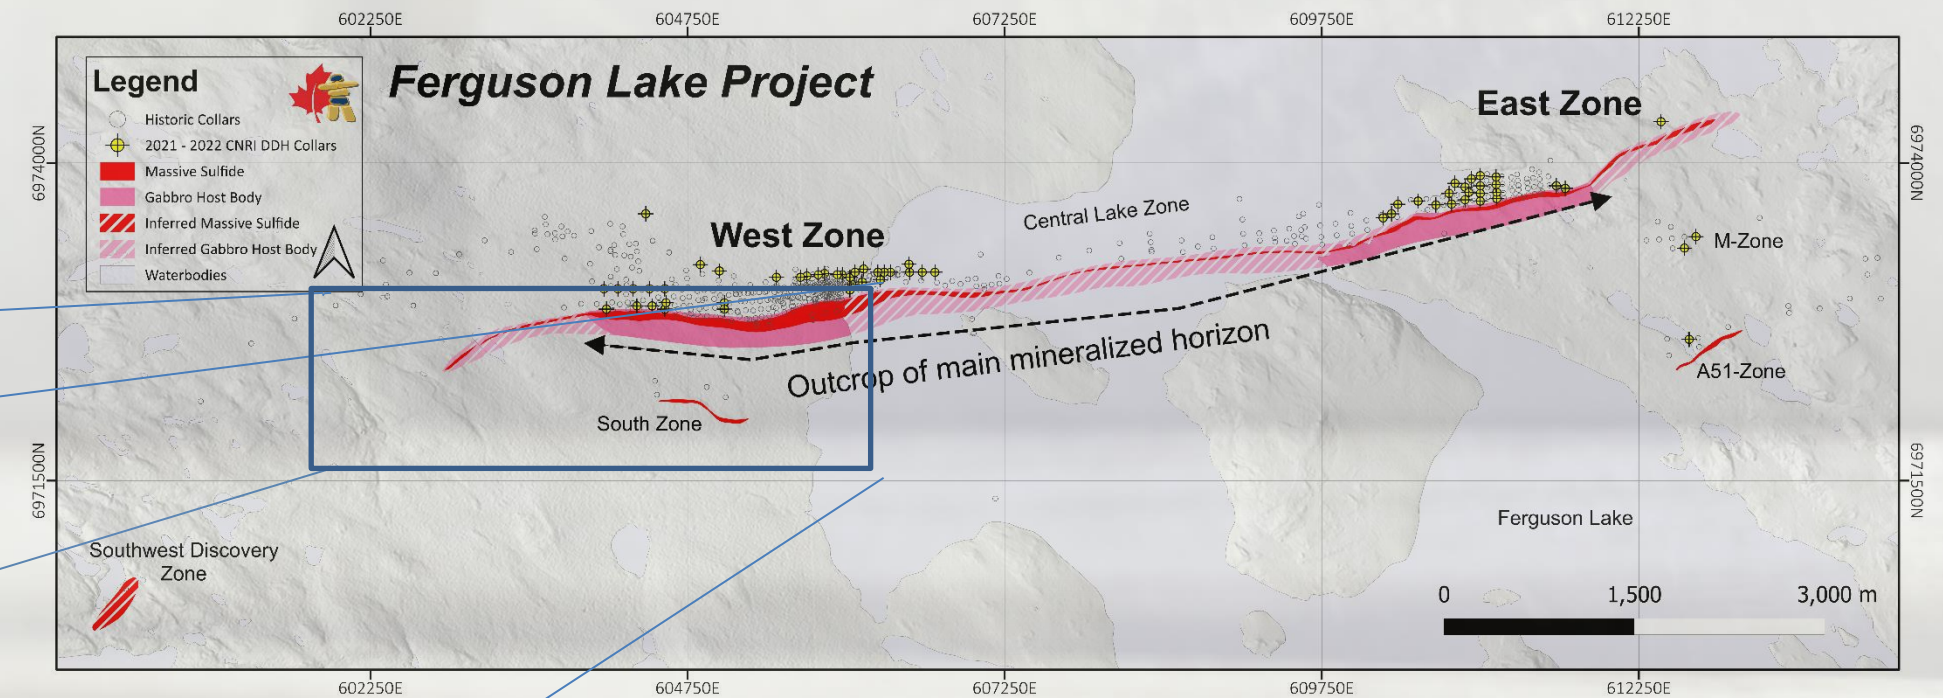

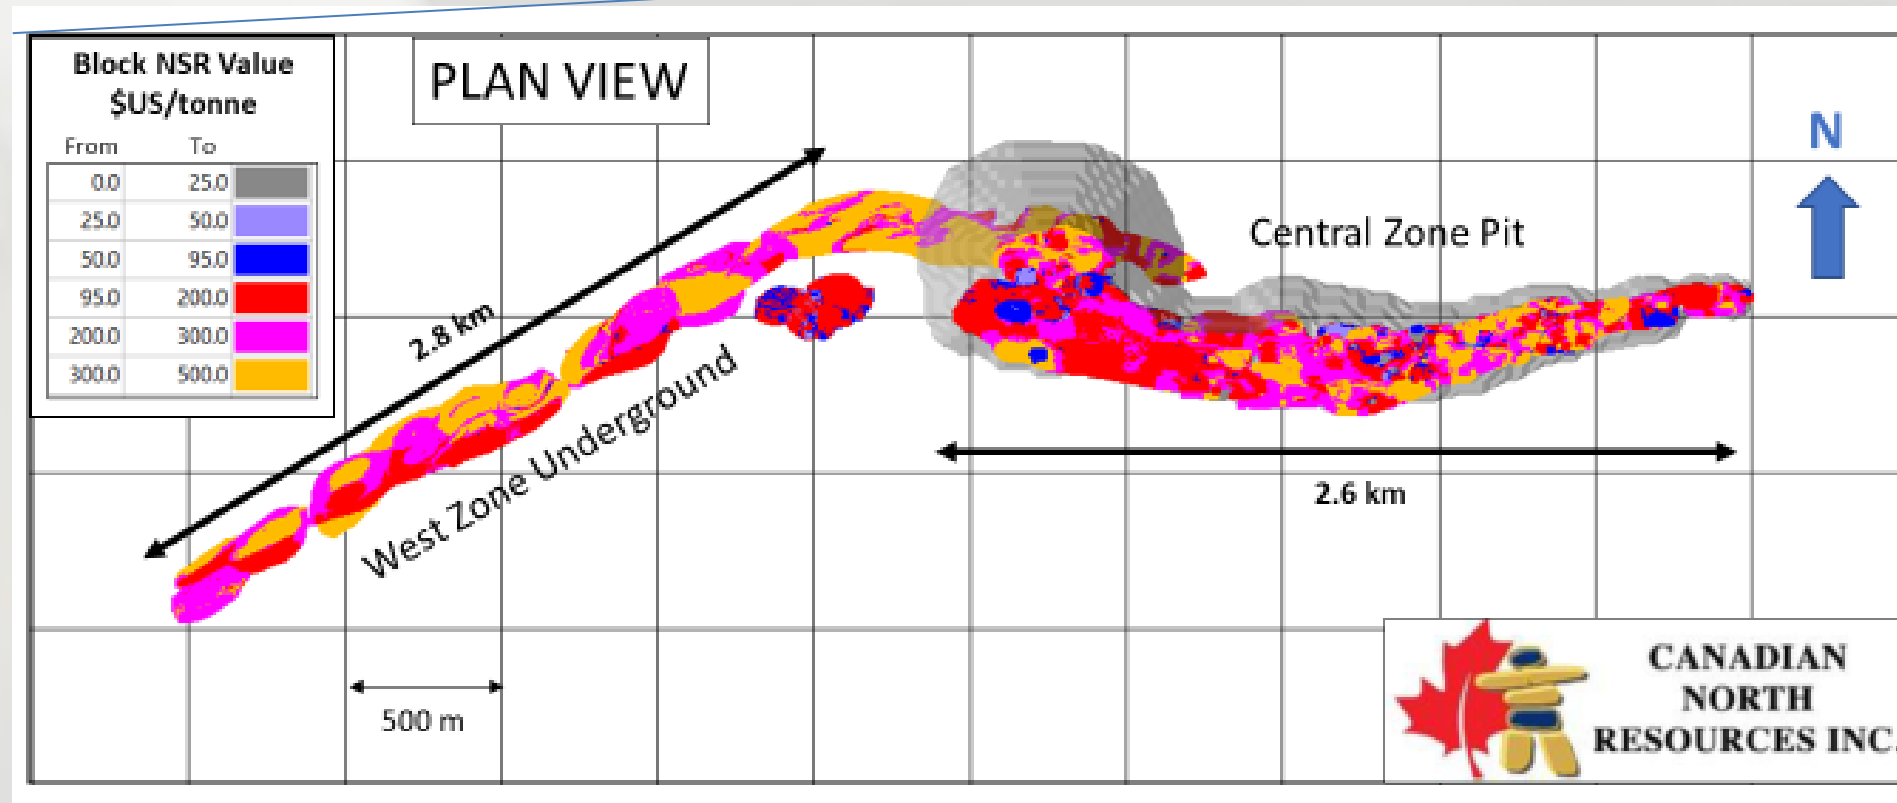

Note: data from “Independent Technical Report, Updated Resource Estimate, Ferguson Lake Project, Nunavut, Canada” filed by Canadian North Resources to Sedar.com on July 13, 2022.

Infill and Expansion Drilling

To add new mineral resources

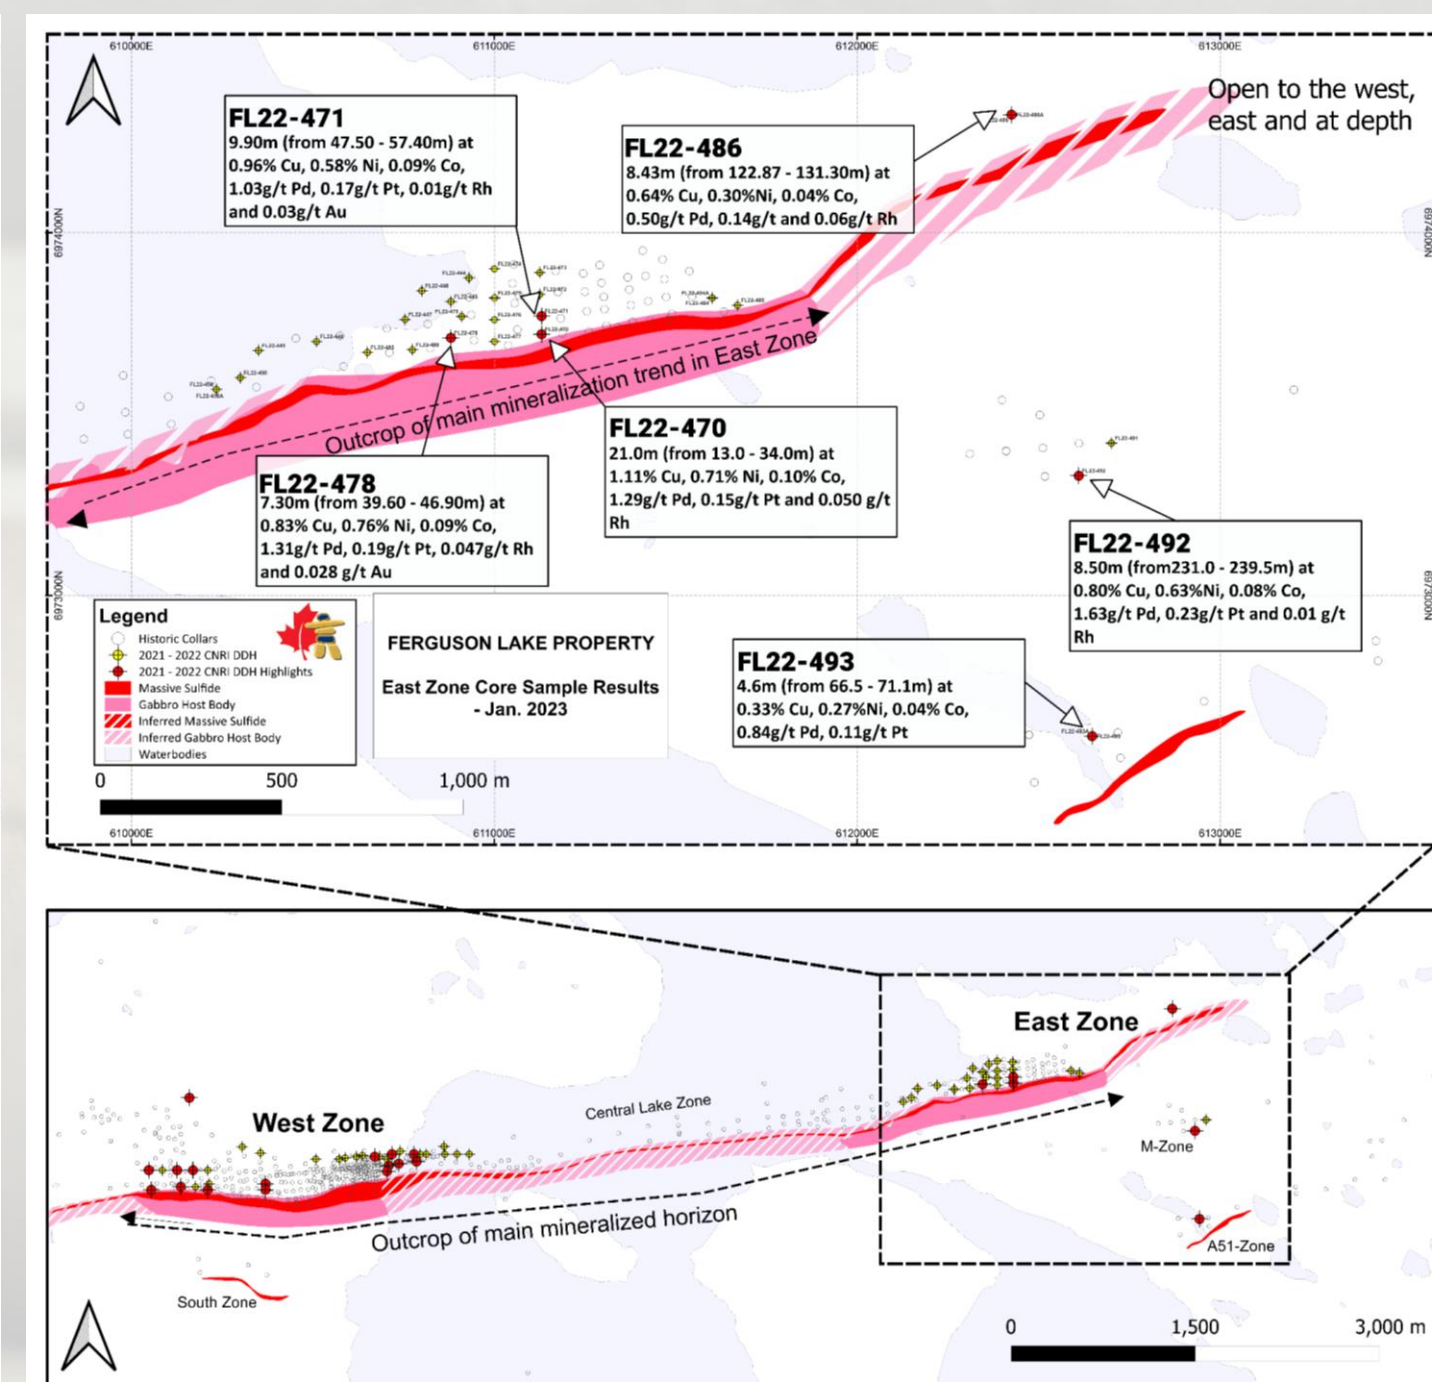

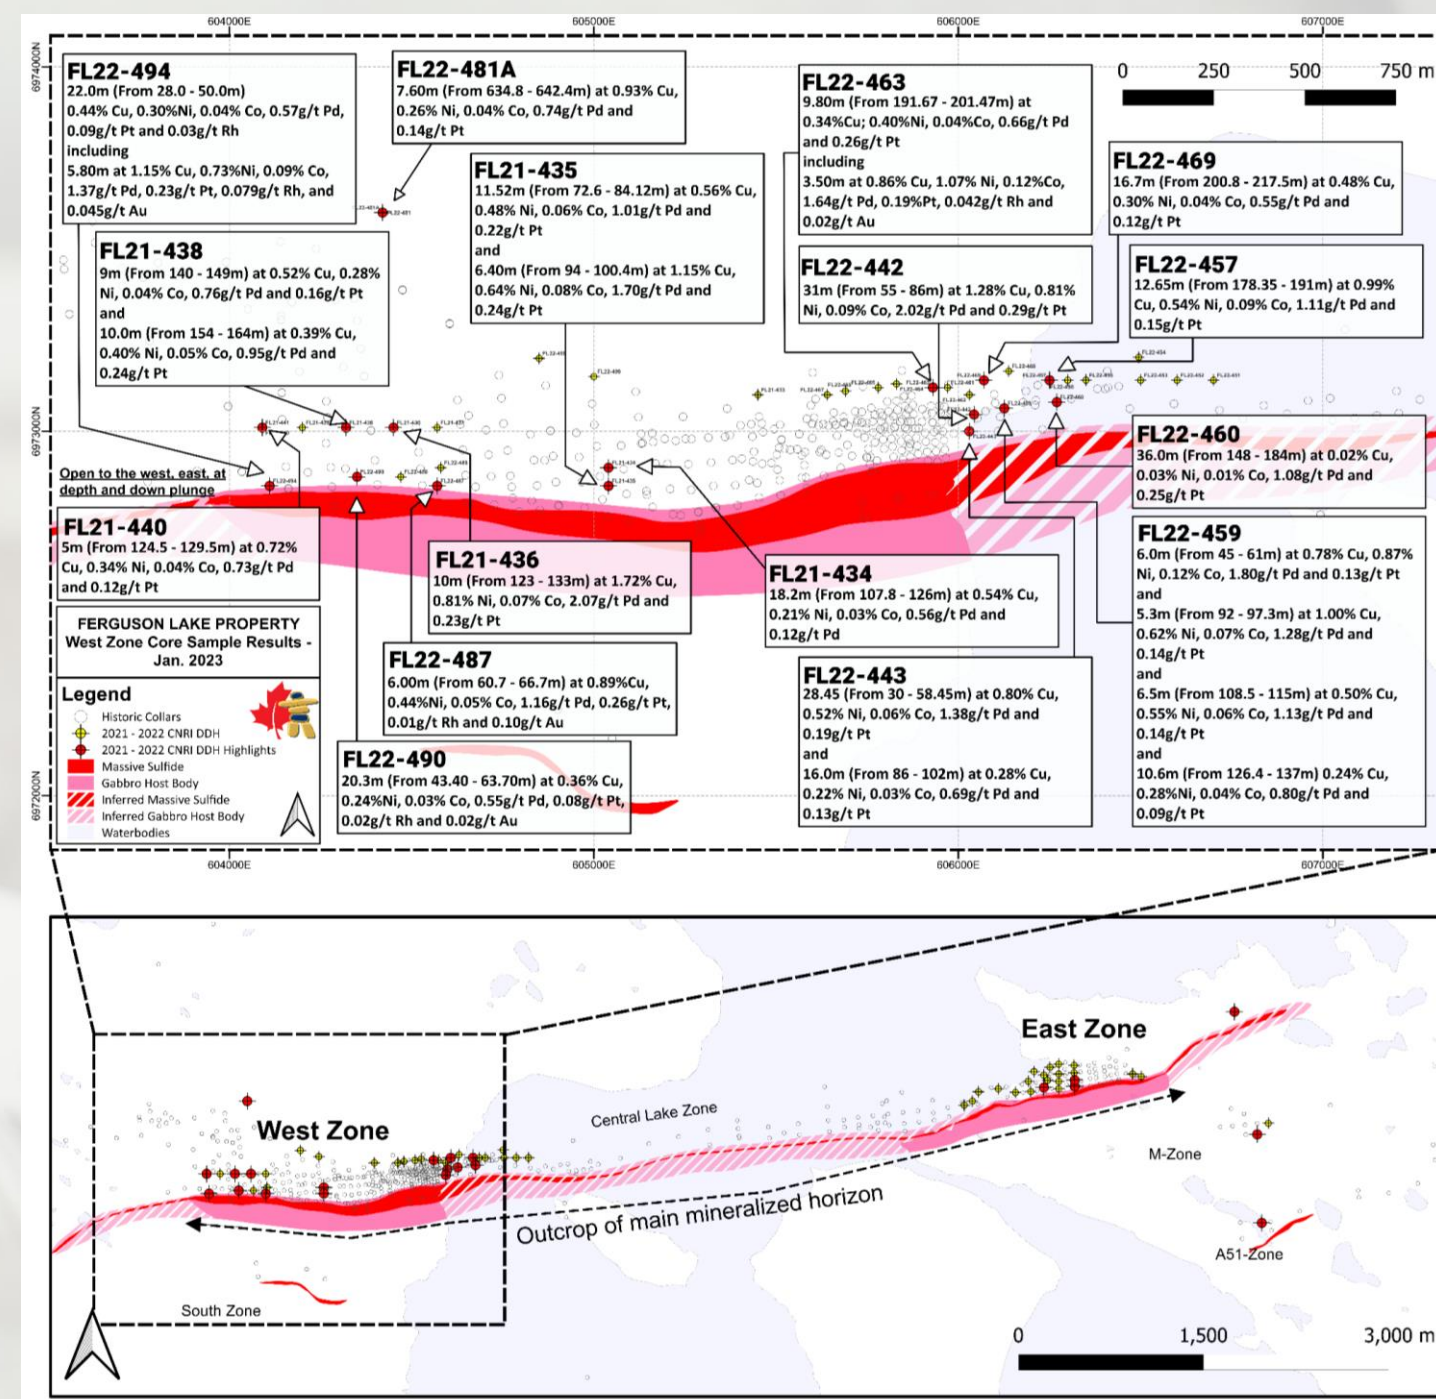

New Drill Results

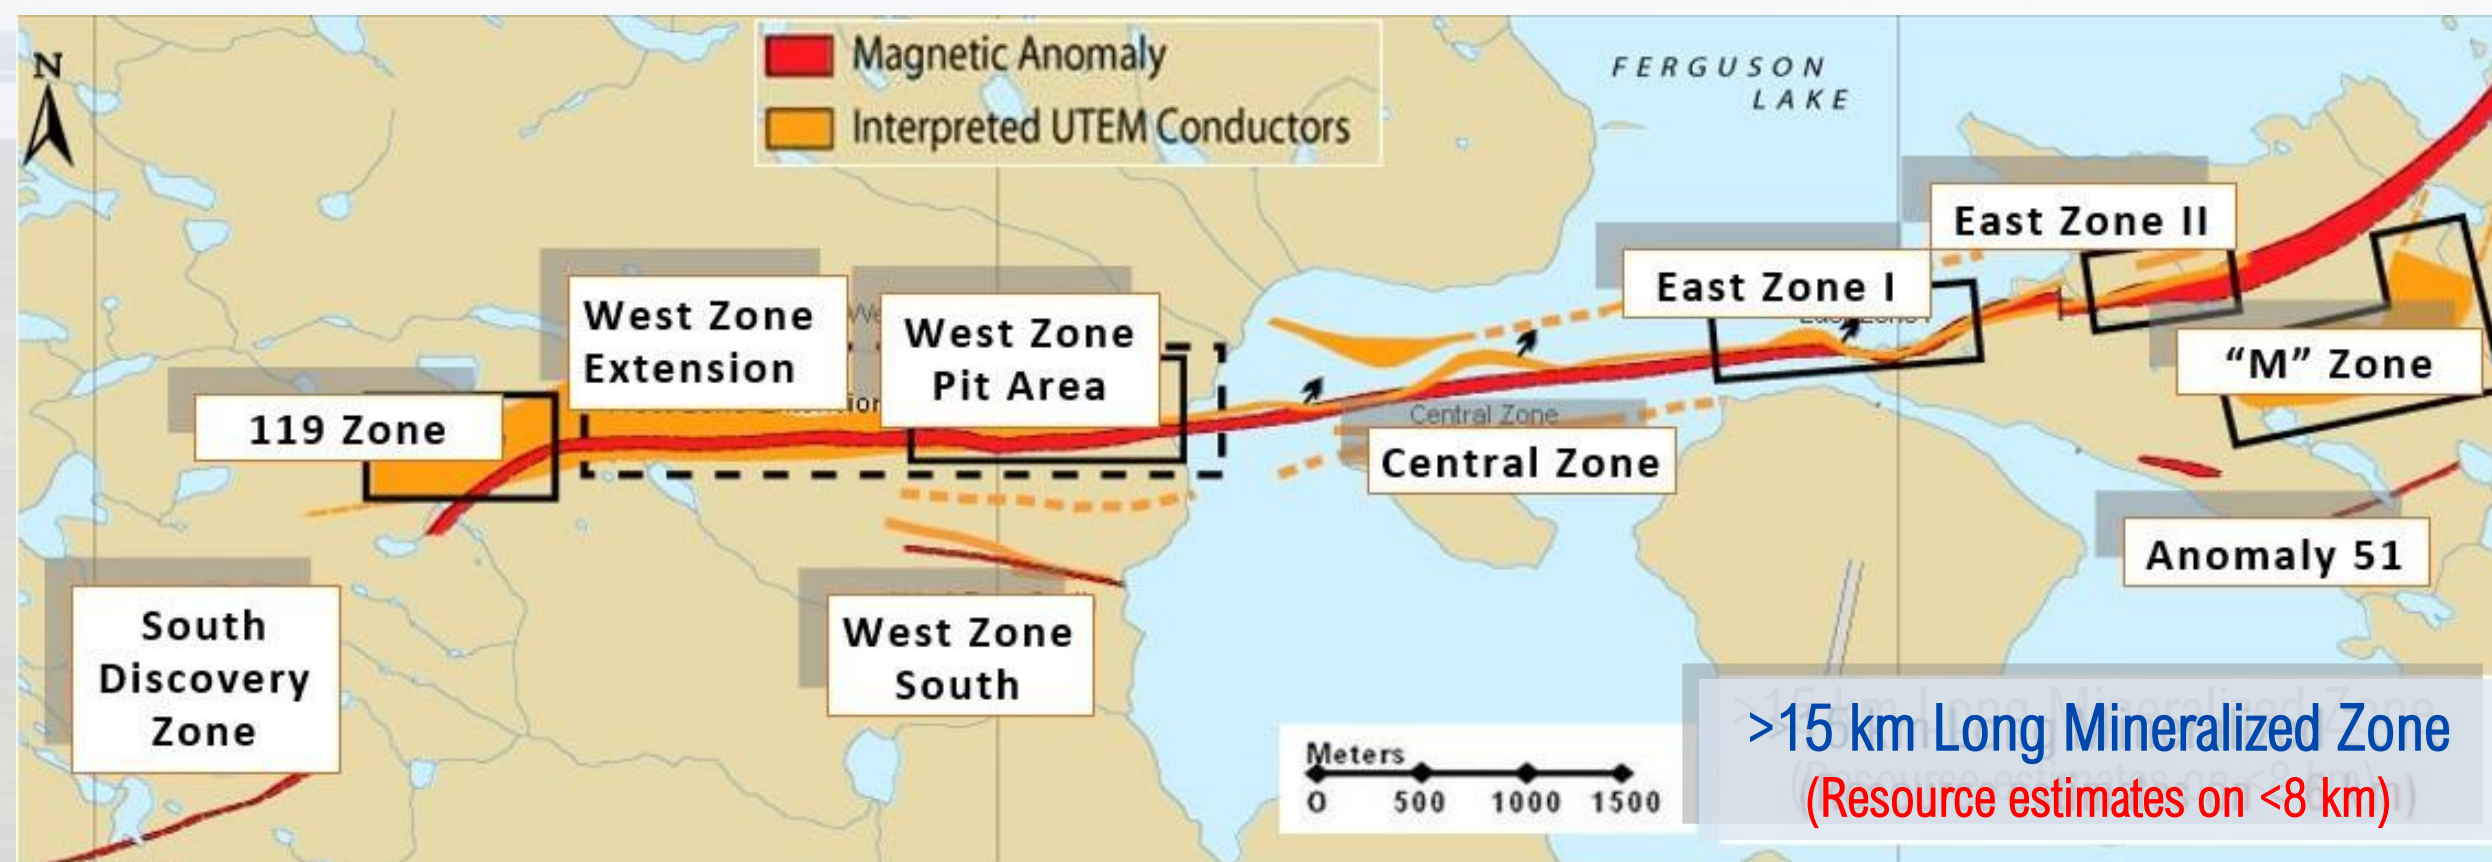

Expanded the mineralization zones

- All 68 holes hitting mineralized zones to be added to the dataset for mineral resources update in 2023
- High grades up to 10.0% copper, 1.81% nickel, 8.65g/t palladium, 4.43 g/t platinum, 0.186 g/t rhodium, and 2.19 g/t gold, and 49 g/t silver
- Confirmed near surface massive sulfide zones (up to 31m) and underneath PGM-enriched low sulfide zones (up to 36m)
- Expanded the mineralized zone along the strike for 1,500 m (800m in the West Zone and 700m in East Zone)
- The mineralization still open along the strike and down dip

EXPANDING MINERAL RESOURCES

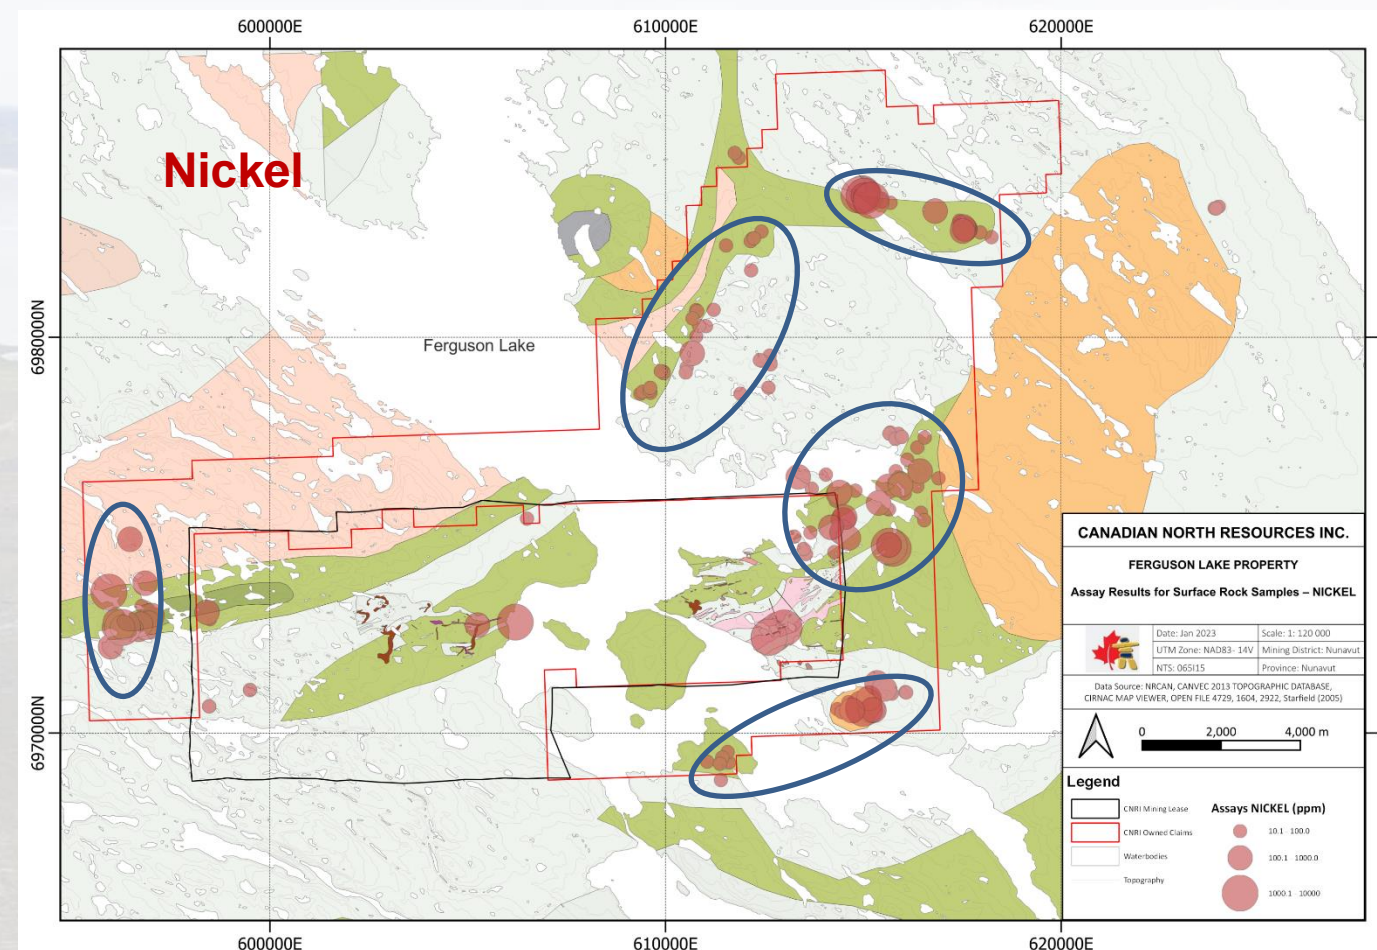

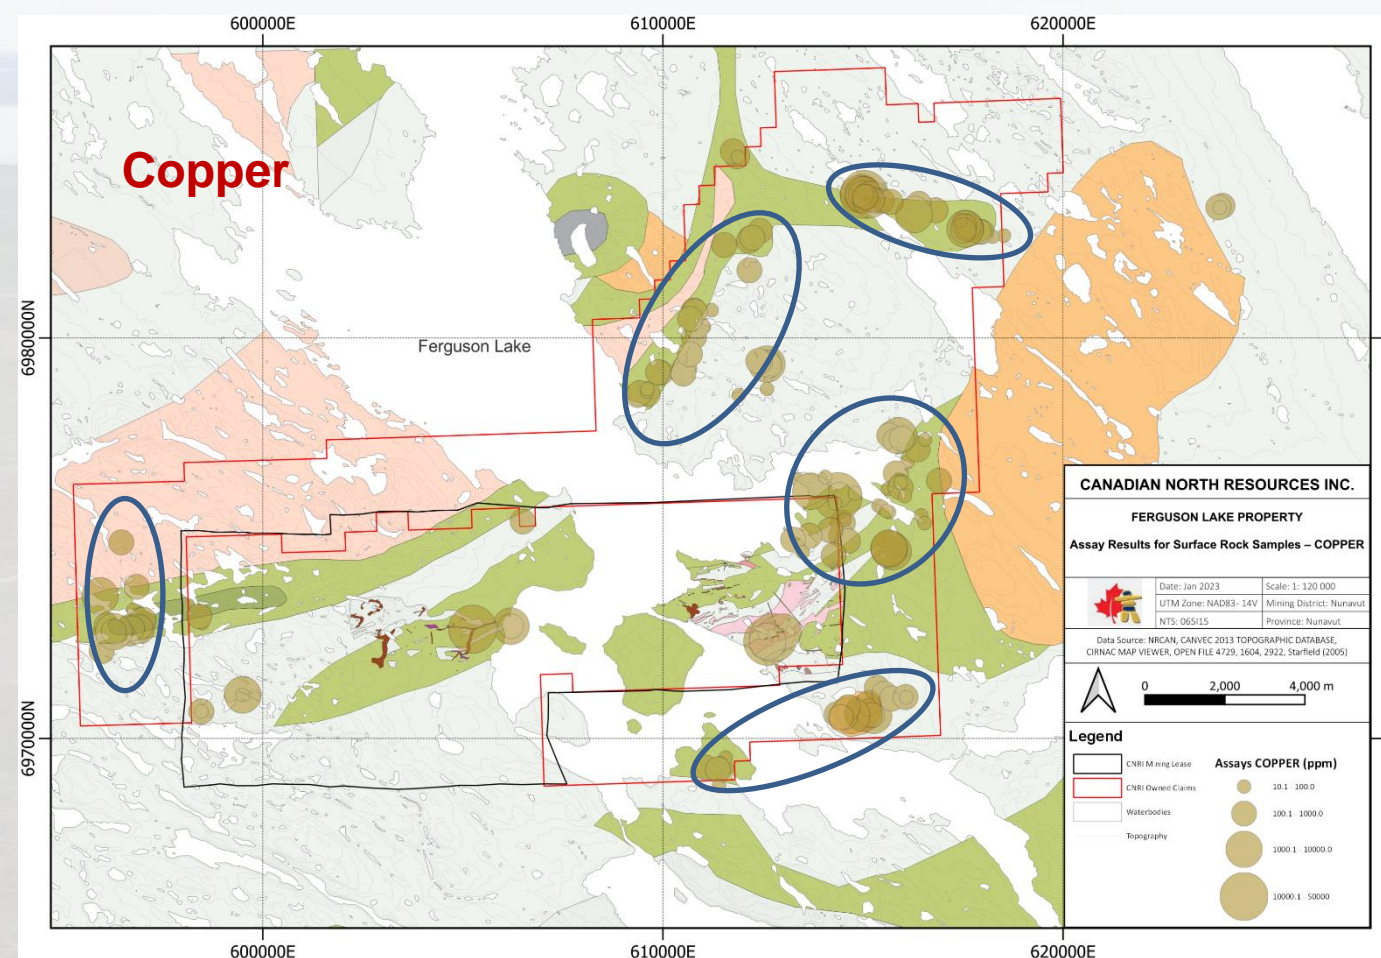

Extensive Mineralization Zones, Extensions within the Mining Leases

- **Ten (10+) sulfide zones to be drilled for resource expansions within the mining leases (96.9km²)**
- **Three (3) massive sulfide zones drilled for resources estimates, as intervals (West Zone):**
 - **Hole FL01-84:** 46.9m@1.10%Cu, 0.64% Ni, 0.07% Co and 1.60g/t Pd, 0.29 g/t Pt
 - **Hole FL22-442:** 31m@1.28% Cu, 0.81% Ni, 0.09% Co and 2.02g/t Pd, 0.29 g/t Pt
 - **Hole FL06-261:** 75.9m@0.93% Cu, 0.49% Ni, 0.06% Co and 1.21g/t Pd, 0.28 g/t Pt

TARGETING MORE POTENTIAL AREAS

Surface Mineralized Areas and Trends Surrounding the Mining Leases

- Extensive Cu-Ni-Co sulfides with high-grade PGM identified from the outcrops in the 156.9 km² prospecting area outside established mineral resources
- Five new nickel-copper-PGM mineralized prospective areas identified at surface to be tested by drilling
- High-grade nickel-copper-PGM (up to 5.0% Cu, 0.99% Ni, 2.70g/t Pd, 0.62g/t Pt, 1.14g/t Au) found in the outcrop rock samples
- Geophysical and geological mapping programs planned

METALLURGICAL RECOVERY

High Recoveries To Support Mine Development

	HISTORICAL* Hydrometallurgical processes ² (Starfield 2012)	RECENT: CANADIAN NORTH RESOURCES INC. Hydrometallurgical processes ³ (CNR 2013)	Flotation plus Platsol (CNR 2016)
Cu	97%	99%	99%
Ni	94%	94%	87%
Co	89%	91%	90%
Pd	N/A	77%	90-95%
Pt	N/A	50%	90-95%

- Previous metallurgical tests were completed on massive sulfide ores only
- PGM recoveries were not included in the Preliminary Economic Assessment prepared by RPA (2011)¹
- Recent tests by Canadian North Resources indicate high recoveries of PGMs
- Comprehensive studies support potential processes with economic recoveries, stable tailings, and energy-efficient recoveries for remote operations

MASSIVE SULFIDE ORE AT THE SURFACE
OF THE WEST ZONE

Notes: *All tests completed by SGS. 1: Roscoe Postle Associates Inc. 2: Historical, Hydrometallurgical process for nickel, copper, and cobalt. 3: Recent, Hydrometallurgical Methods plus final PGM-base metal element extraction from residue using Platsol process. NA – not available.

Corporate Team

Experienced, Seasoned & Dedicated To Build Asset Value

Lee Q. Shim

CHAIRMAN AND DIRECTOR

Global entrepreneur, founder, investor, and business executive for over 35 years, Mr. Shim is the founder and Chairman of Lee Li Holdings with diverse companies operating in Canada, US, China, and South East Asia. His portfolio also includes investment in a Canadian mining company and has been a director and shareholder in a number of notable capital funds.

Ms. Aier Wang

DIRECTOR

Over 20 years business success as an investment manager in financial, health, and real estate, and wood product businesses; and currently as an Executive Director of a conglomerate group. Ms. Wang holds an Executive Master's Degree in business administration.

Rick Brown

DIRECTOR

Manages the China desk of Sprott Inc for investors in the resource sectors. With N.Y. banks, he completed financings, M&As, and divestitures in the Americas and Europe. Mr. Brown has more than 30 years in the financial markets. He holds a Bachelor's Degree in Economics and a Master's Degree in Finance.

Mike Weeks

DIRECTOR

Over 25 years in the power generation and resource industries. Mike was a founder, president and CEO, and is presently a Director and Executive VP of Operations of Angkor Resources Corp. He has an engineering background and holds a First Class Power Engineering Certificate.

Dr. Kaihui Yang, PhD

CEO, PRESIDENT, AND DIRECTOR

Professional geologist with > 30 years experience as a geologist for Barrick, Inco, Falconbridge, and the World Bank Group; and a consultant and director for several major Chinese and Canadian mining and investment companies.

Dr. Yang was an EVP for Zijin Mining Group (CAD\$40B, market cap), a chairman and director of Sprott-Zijin Joint-Venture Mining Fund, and a founder, officer and director of public mining and exploration companies.

Carmelo Marrelli, CA

CFO

Financial, accounting, and disclosure expert. A director and in senior roles with private and publicly-listed companies. He is a Chartered Professional Accountant with 30 years of experience.

Dr. Trevor Boyd, PhD, PGeo

VP EXPLORATION

Professional geologist with >30 years experience as a consultant, qualified person, officer, and director with multiple mining and exploration companies and worked as a geologist for Noranda, Falconbridge, and Westmin Resources for projects of base and precious metals, uranium, nickel-copper-PGM, tungsten, tin and indium

Dr. Xian Jian Guo, PhD

TECHNICAL ADVISOR

Professional Metallurgy Engineer with over 35 years experience in process dev't, plant operation, optimization, engineering and he has successfully managed a number of large int'l mining/mineral projects with multi-billion-dollar capital investments.

Has held senior roles globally as Chief Engineer of Zijin Mining Group; a VP of Ramu NiCo Management Ltd. in Papua New Guinea; & a Technical Director of Hatch Ltd.

ACCOMPLISHMENTS TO DATE

2021-22:

- Private Placement Financing of \$22 Million
- Completed NI43-101 Technical Reports, Updated Mineral Resource Estimation
- Infill and Expansion Drilling – 18,144m completed

2023/24

1

Follow-up funding for resource expansion, PEA and pre-feasibility study

2

Work programs:

.....

- Resource Update and Definition Drilling: to enlarge the base metal and PGM mineral resources.
- Establish high-grade resources for PGM in low sulfide PEM-enriched zones with definition drilling along the known mineralized belt
- Drilling test for high-grade nickel-copper massive sulfides in the prospect areas
- Geophysical and geological mapping programs
- Expand metallurgical tests with current and alternative processing technologies for target PGM and Base Metals
- Environmental / engineering studies and community engagement

Timeline + Work Plans

Focus On Growth In Mineral Resources And Potential Project Development

Appendix:

Additional Technical Information on the Mineral Potential of the Ferguson Lake Project

Summarized Information for Green Metals Increasingly Used in Clean Energy, Electric Vehicles and High-tech Resolutions

MINERAL ZONES AND EXPANSION POTENTIAL

Significant Copper, Nickel And PGM Potential Over The Area

- **The Mineral Resource** modelled primarily on the occurrence of massive or semi-massive sulphides.
- **Low-sulfide PGM enriched zones** – resource modeling indicates thick intersections open at depth and along the strike.
- **Copper-nickel-cobalt-PGM** massive (>50%) sulfide zones are open at depth and along the strike
- **Significant intersections** of massive sulfides in 10 holes along the Central Zone.
- **Thick disseminated** – sulfide copper, nickel, cobalt, and PGM zones will be further drilled in grid
- **Seven (7+) mineralization zones** – to be drilled further for the continuity of PGM-Cu-Ni-Co mineralization.
- **New discoveries** – from surface sampling

CENTRAL ZONE

10 drill holes with significant intercepts

2% Ni-Cu and 1.51 g/t PGM (over 17.4 metres)

Massive Sulfides
Looking west on West Zone:

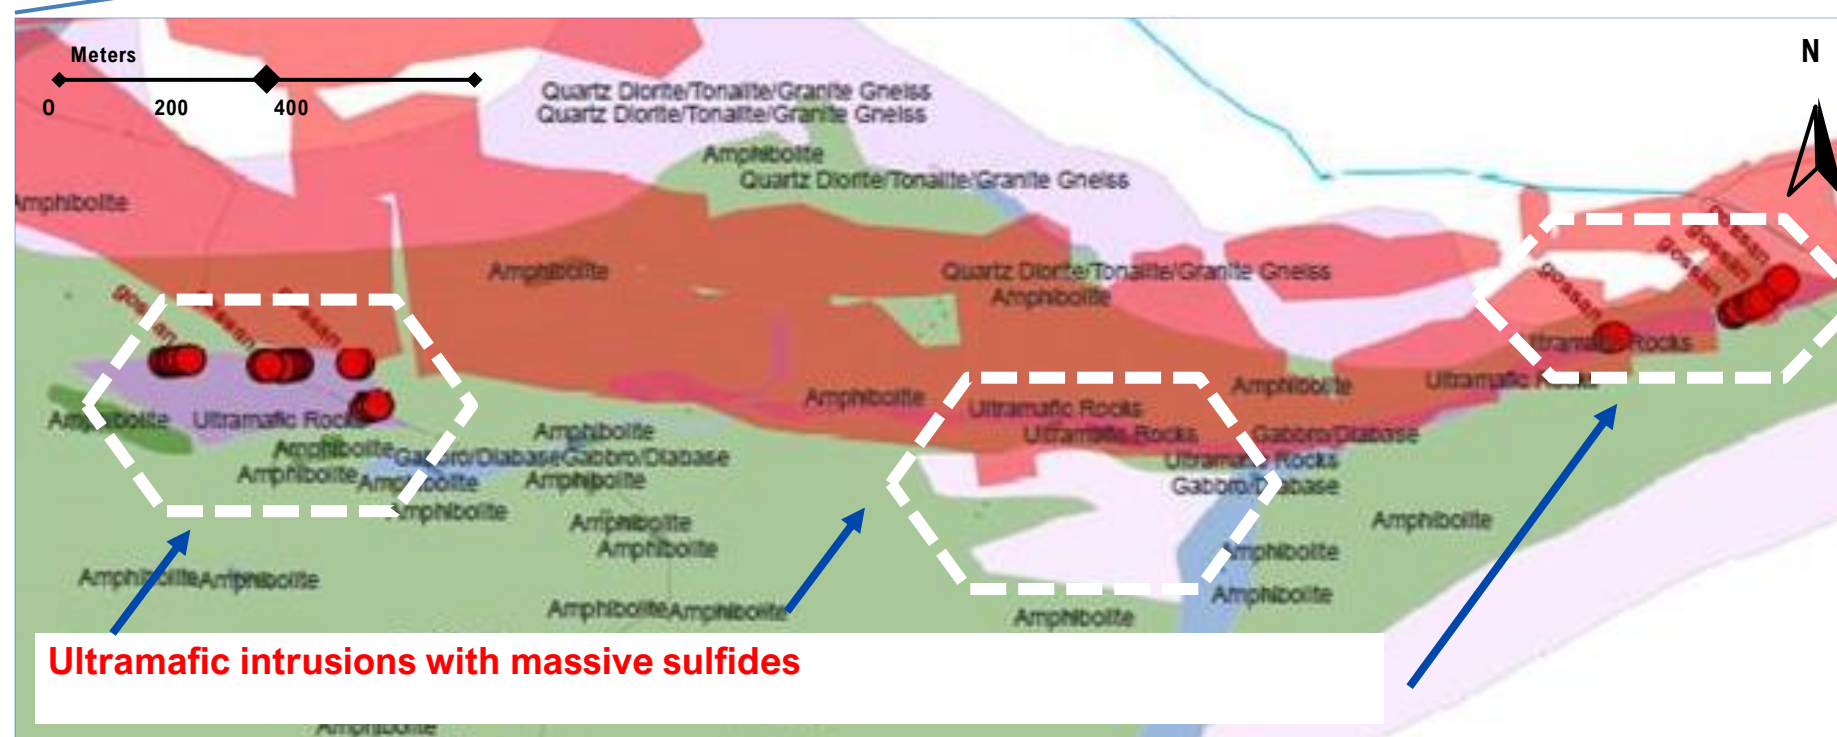

MASSIVE SULFIDES WITH ULTRA-MAFIC INTRUSIONS

High-Grade Potential Across Main Mineralized Horizon

Base Metals (Cu-Ni-Co) and PGM Zones on TEM anomalies

Projected massive sulfides with mafic-ultramafic intrusions

Outcrop of ultramafic intrusions

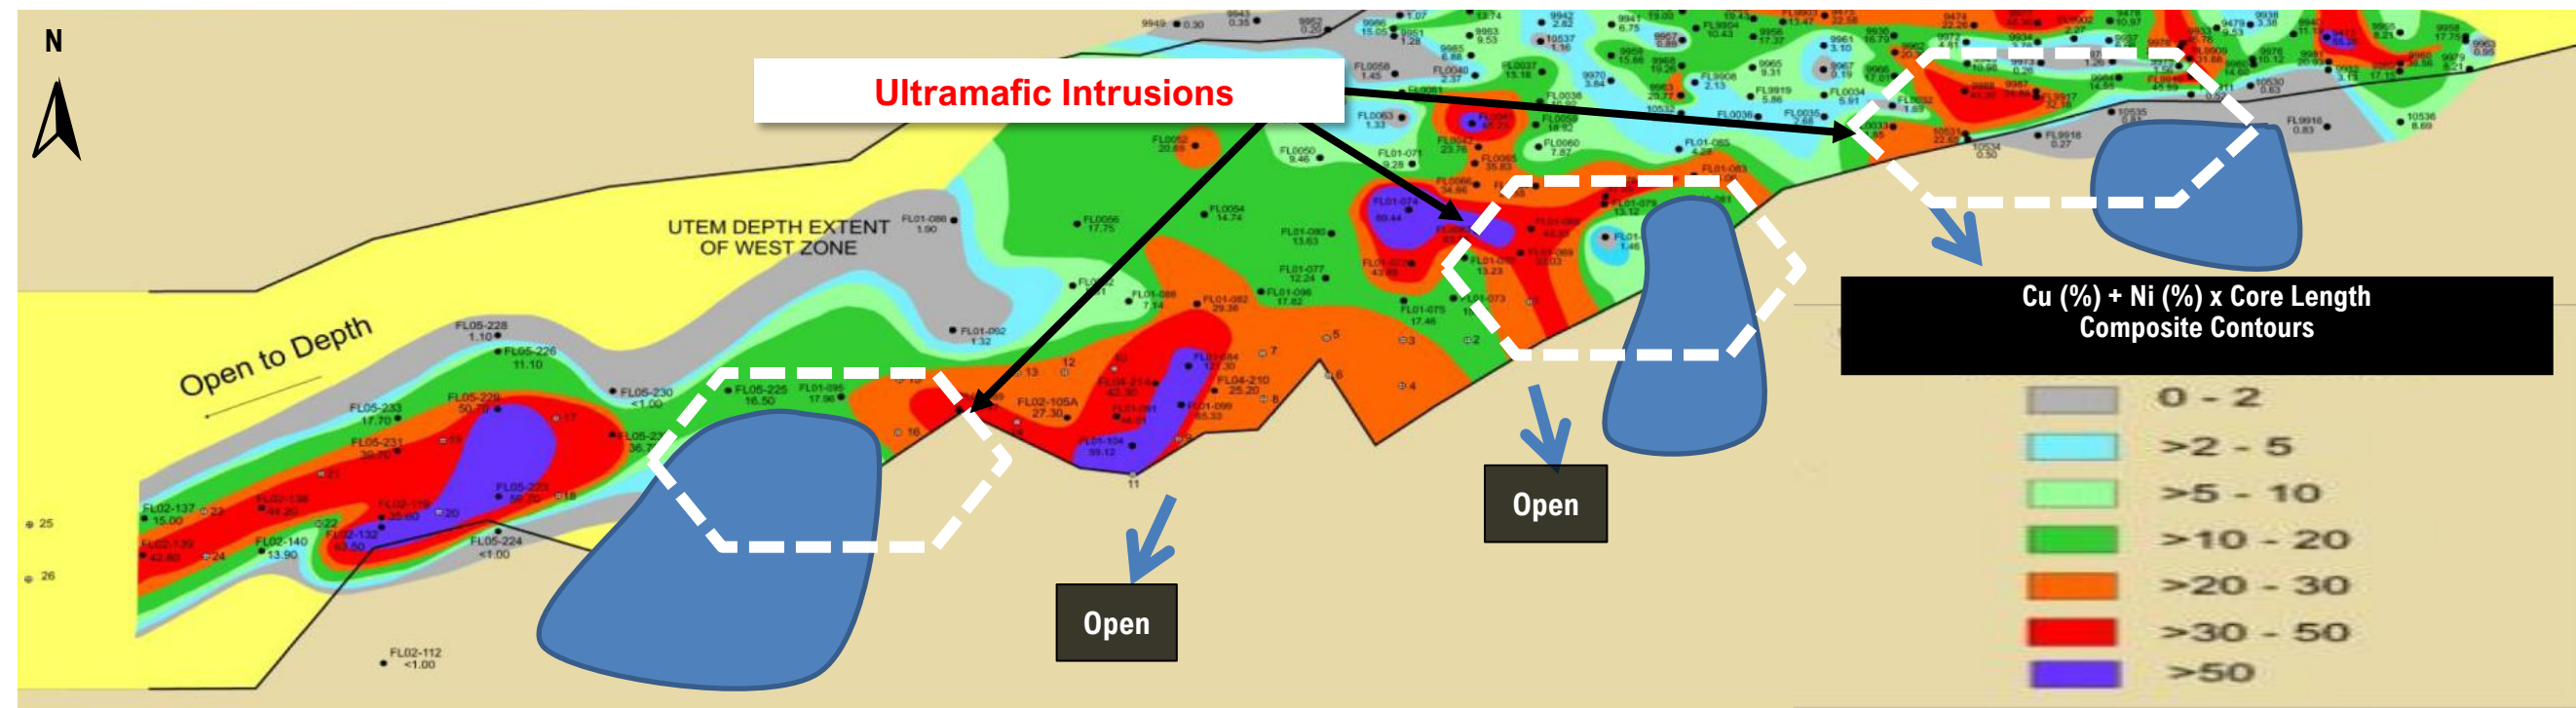

Outcrop of massive sulfide ore bodies

HIGH POTENTIAL WITH ULTRAMAFIC INTRUSIONS

Potential For More High-Grade Massive Sulfides

West Zone - Longitudinal section showing high-grade mineralization open along the strike & at depth.

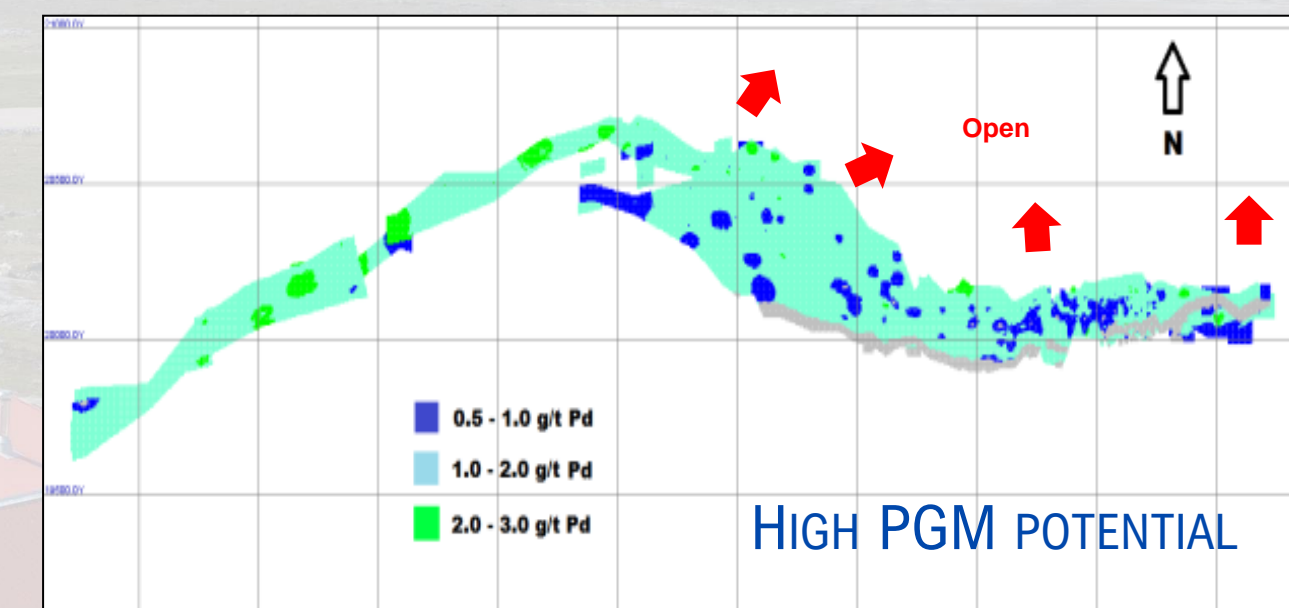

- Significant potential – for more high-grade Base Metal (copper, nickel, cobalt) and PGM mineralization with mafic to ultramafic intrusions
- Previous exploration – focused on massive sulfide lenses in upper gabbros, not on the footwall structures
- Geochemical study – indicates massive sulfides are related to higher Mg contents in ultramafic rocks at footwall

UNTAPPED PGM POTENTIAL

PGM FOUND FROM SURFACE TO A
DEPTH >1,200 m AT West Zone.

PGM Associated with

- **Massive sulphides** (>50%) – lower massive sulfide zones open along the strike of West Zone.
- **Host stringer** or disseminated sulfides (<50%) – thick intersections open at all directions
- **Footwall** disseminated/laminated PGM-rich sulfides (<10%) – underexplored
- **Central Zone** – underexplored and no resource estimate to-date
- **East Zones** – limited PGM analyses of the mineralized zones
- **Other 5 Zones** – (119 Zone, South Discovery, West Zone South, M-Zone, and Anomaly 51) – a few drill holes tested for PGMs

HIGH PGM POTENTIAL

Rhodium Potential	Intercept m	Rh g/t	Pd g/t	Pt g/t
FL02-132	0.10	2.58	3.69	0.01
FL02-101 W1	0.14	1.11	5.37	2.39
FL02-101 W5	0.16	0.71	42.58	5.62
FL04-195	1.25	0.46	1.59	0.01
FL05-230	1.50	0.40	0.62	0.05

Massive sulfides outcrop

Gabbro Dome Outcrop

LARGE AND HIGH- GRADE PGM SYSTEM

Potential For High-Value PGM Zones

- **High-grade PGM values in low-sulfide zones, up to 103g/t palladium and 43.36g/t platinum**
- **Rhodium (up to 2.5g/t) and gold assays in historic exploration**
- **Very thick (up to 71.3m) PGM mineralization zones associated with stringer/disseminated sulfides**
- **Occurs in footwall structures of the northeast-dipping gabbro units**
- **Gabbro units host low-sulphide PGM targets in 10 Zones (West, East, Central, M- Zones, etc.)**
- **Continuity over an east-west strike length of main mineralized horizon more than 15km**

Drill hole no.	Significant Intercepts	Pd g/t	Pt g/t	Cu %	Ni %	Co %

COPPER AND NICKEL TARGET MARKETS

Growing Demands of Copper and Nickel in
Electric Vehicle and Battery Industries

Copper
Spot Price: \$3.76/lb*

Nickel
Spot Price: \$9.25/lb*

Copper is used in automotive, building, electric vehicles (EV), energy storage (ES), electrical, electronics, machinery, transport, and many other uses.

Global metal market for copper is the largest, behind iron and aluminum.

4-times the copper in EVs as compared to gasoline vehicles.

Lack of new significant discoveries, and very low investment in exploration.

Goldman Sachs raised their 12-month forecast to \$11,000 per tonne, up from \$9,000 per tonne.

China's demand for strategic metals has had a major impact on copper prices.

Clean tech sectors seen to easily boost global copper demand by 10% - 15% per year by 2030.

Nickel is used in stainless steel, alloys, plating, foundry, EV batteries, energy storage, and in chemicals.

- Demand for infrastructure and construction.
- High demand for EVs and energy storage (ES).

Sustained market from China (>50% global annual demand) and other developing regions.

By 2040, demand for nickel in EVs and ES is predicted to be 31% of global market (4% in 2018).

Notes:* Kitco Metals – August 2023

PGM AND COBALT MARKETS

Strong PGM Trends And Cobalt Market Dynamics

PALLADIUM, PLATINUM, RHODIUM, AND COBALT ARE USED INCREASINGLY IN THE CLEAN-ENERGY AND HIGH-TECH SECTORS WORLDWIDE

- Automotive demand with usage growth and Pd shortfalls

- Anticipated upward trajectory in demand and price
- Automotive as the largest Pt segment is positive
- Rarity, distinctive qualities, and unique properties

- Leading emission- cutting Rh usage driven by regulations
- For glass, chemical, alloys, medical, and aircraft sectors

- Strategic in commercial and industrial uses
- Geopolitics driving ethically-mining outside of the Congo
- Rarest of the PGMs and one of the rarest metals on Earth
- Prices in 2021 hit record of \$22,300/oz, surpassing 2008

Palladium
Spot Price: \$1244/oz*

Platinum
Spot Price: \$932/oz*

Rhodium
Spot Price: \$3,400/oz*

Cobalt
Spot Price: \$33,420/T**
